

Sustained impetus for your concrete conveying

Single piston for efficient concrete conveying

- More economical for all operational conditions
- Service life that is up to 3 times longer than that of compact pistons
- One-off backfitting costs
- Especially suitable for high pressures and abrasive concretes
- Lower wear costs and a higher level of machine availability
- Backfitting also possible for machines from other manufacturers

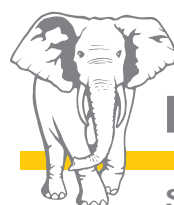

By converting to single pistons, save more than 50 per cent of your operating costs compared with the compact piston.

Single-piston and compact piston – expert quality, as you would expect from Putzmeister

Putzmeister is known for its innovation – initiating things that make your work better, easier and more economical. We also provide the right incentive with our selection of pistons that is tailored to suit your needs. There are two options to choose from: the single piston for high expectations and the compact piston, the convenient variant for standard applications. Please contact the Putzmeister After Sales and Parts Service for details.

Single piston – when it goes right to the point

Single pistons are a worthwhile investment, and not just when you are working with high pressures and abrasive concrete. This is where the single piston shows its edge over the compact piston most clearly. A service life that is up to two or three times as long quickly recoups the expense involved in conversion, thereby contributing to a healthy bank balance. Thanks to the wear-resistant material of the piston, you save operating costs and valuable working time. The earlier you convert, the more you earn!

Services

Compact piston – because standard suffices when it is of a high quality standard

For normal requirements, there are low-cost pistons that demonstrate an adequately long endurance. Compact pistons are part of Putzmeister's standard new pump equipment, because they are practice-oriented and suitable for all areas of application in concrete conveying, and contribute to the good price-performance ratio of our pumps.

Compact piston, when good enough is good enough:

- Suitable for all normal applications in concrete conveying
- Stable value and sufficient service life
- Standard in all new Putzmeister pumps
