

# Success is in the detail

For example, 3-fold service life

There is nothing fatiguing about our wear parts. One can choose from different qualities that are fine-tuned to the specific purpose. DURO 22 are armoured parts for nearly every application. Spectacle wear plates and rings made of hard metal that have been developed for extreme stresses, and heavy-duty cast parts for pumping fluid materials and high-pressure delivery. Because costs and benefits should be in the best proportion possible.

**S transfer tube wear parts made from hard metal, DURO 22 or heavy-duty casting? The decision is based on use:**

## Hard metal

- High hardness values: 2 to 4-fold service life compared with DURO 22
- Even lower wear and maintenance costs
- Material in the middle section from Hardox
- Hard metal made in Germany

## DURO 22

- Very good service life to price ratio (sufficient service life)
- Suitable for practically all fields of application in the concrete pumping sector

## Heavy-duty casting

- Extremely low level of blast wear
- Ideal for very fluid materials
