

Putzmeister

Genius, because it is so simple

Concrete brake, i.e. concrete flows evenly and precisely to the spot where it is needed

We have consistently implemented an apparently simple idea to make work safer for the person at the end hose. The concrete brake ensures that the concrete flows evenly and smoothly without spraying out at the outlet. In addition, the level of wear is also reduced, because the pump works more smoothly and is therefore practically vibration-free.

For safe and economic concreting:

- Uniform concrete flow, even at low pressure
- Quiet boom and quiet pump
- No risk of injury from concrete spatter
- Lower operating costs thanks to favourable procurement, quick and simple assembly and less wear of the elbow and end elbow

For all end hoses with a diameter of 100 mm or 125 mm
